

YEAR 5 SCIENCE - ACTIVITIES

Living things and their habitats

Look at the life cycle of a frog – create a mobile or a comic strip to illustrate it.

Look at a plant/flower and draw all the parts of a plant.

You could then look at the parts of a flower and you could even (if you ask permission first) take the flower apart to look at the different parts.

Life cycle of a flowering plant – look on You tube at plants growing. Grow a plant from seed and record what you notice.

Look at how things grow. Grow some cress seeds in the dark and some in the light and note the differences. You could draw simple pictures to show any differences or write about them.

Design a creature that lives in the rainforest. (See L23 Rainforest PowerPoint).

Investigate a habitat (1metre safari PowerPoint). You could choose several areas in your garden to do this rather than the field.
