

Why not to litter in school.

Reasons why-

It makes everything messy and out of order.

It's off-putting to visitors

It can be dangerous to animals

It can end up in streams,
rivers and the sea.

Annabelle D and Olivia R.

How it affects Animals

Litter can affect all animals. Animals can eat or even worse get trapped in it.

if we don't do something about the litter many animals will die.

100 million marine animals die each year from plastic waste alone.

It is bad for us too – plastic in the oceans ends up in our food.

WE NEED TO STOP THIS!!!!

The Big School Clean 15th – 31st March

Fact:

If every school child picks up one piece of litter, nearly 10 million pieces of litter will be saved from the environment!

What you can do:

- Borrow the litter pickers from The Picnic room and volunteer to litter-pick at lunch or break.
- The Eco-Committee will record how much we collect!

Remember to dispose of rubbish properly:

- Cardboard, hard plastics(water bottles) can be recycled in school.
- Take soft plastics (crisp and chocolate wrappers) home to recycle.
